

CALL CENTER DASHBOARD

Project Documentation & Methodology

PROJECT OVERVIEW

Interactive Excel dashboard built to analyze call center performance using Power Query, Pivot Tables, VBA automation and advanced dashboard design principles.

The dashboard allows users to explore performance metrics across years, months, channels and locations.

DATASET

Source:
Kaggle

Records:
98,823

Years:
2023–2025

Original Dataset:
32,941 rows
October 2020

Columns Used

id
sentiment
csat_score
call_timestamp
reason
city
state
channel
response_time
call duration
call_center

KPI DEFINITIONS

CARD 1
Total Calls -> Total volume of interactions.

CARD 2
Avg CSAT -> Average customer satisfaction score.

CARD 3
Avg Duration -> Average call duration.

CARD 4
SLA Compliance -> Calls processed inside target.

Columns Used

id
sentiment
csat_score
call_timestamp
reason
city
state
channel
response_time
call duration
call_center

DASHBOARD FEATURES

- Dynamic Filtering
- Interactive Charts
- Navigation Menu
- Reset Filters
- Automated Refresh
- Responsive Layout
- Multi-Year Analysis
- Power Query Pipeline

BUILD PROCESS

Import CSV -> Power Query -> Transform Data -> Pivot Tables -> Dashboard Design -> VBA Automation -> Final Delivery.
